

User Study 1 Report

Performed Tasks

Our program will be meant for people to organize their games and to easily access all of their games. We would like as much information to be displayable as possible, giving options to the users to allow them to choose which information is readily available and which bits are less in the way. Overall, we want to give users the ability to have an all-inclusive launcher that is displayed exactly how that specific user wants it to be displayed.

Our Prototypes

Our Questions and Preparation

We asked questions to those we interviewed that gave us a lot of information to think about. Our question included a few introductory questions, such as “What do you look for in a game launcher?”. We then showed them our prototypes and asked which they preferred and what the interviewee thought the application was meant to do. We

followed up with questions about specific portions of our design, such as color scheme, menus, format, etc.

Responses

Of our 6 interviewees, 3 preferred Version 2 of the program, and 2 preferred Version 1. We got a lot of good information. 2 of Elias' interviewees expressly stated they liked the panel system used in version 2. Jacob's interviewees seemed to like the color schemes and wanted the game library to resemble Steam. One said the program is too thin and they would rather the program be a full-size program rather than just an overlay. Another liked the overlay idea. One also said the teal buttons were great and worked very well with the color scheme, but the other prototype had an overall better layout. A suggestion from one of the interviewees was that Version 2 of the program could use a submenu as provided with Version 1.

Conclusion

In conclusion, we've decided that the prototype we are going to move forward with is going to be version 2, as that is the prototype that not only more of our interviewees preferred, but the one that we preferred too. We have plenty of information to go off of to improve this version, meaning this is overall the better option for us.
